- ✓ QUICK and COST EFFECTIVE
- ✓ SCALABLE and CUSTOMIZABLE
- ✓ FLEXIBLE
- ✓ SIMPLE, EASY TO USE and MANAGE
- ✓ ROAMING – Desktop follows user from device to device

Deliver Secure Authentication with Proximity Badge Access

QwickACCESS for Chrome Devices was created for organizations looking for ways to deliver secure proximity badge access while reducing the costs associated with end-user computing.

QwickACCESS, HealthCast's secure authentication solution that provides proximity badge access to local and virtual environments, now supports Chrome devices. QwickACCESS users simply tap their badge to access their session and again to secure it, eliminating the need to type in usernames and passwords multiple times throughout the day. QwickACCESS unique proximity badge functionality also allows users to 'tap-over' another user's session, securing the open session and enabling it to be accessed anywhere on supported devices. Enhancing user compliance with privacy and security policies, QwickACCESS strengthens data security while boosting user convenience and efficiency.

This new solution brings HealthCast, Citrix, and Google together to provide a versatile and cost-effective approach to resolving desktop security, application delivery, and user productivity challenges. Customers choose Chrome devices for their speed, security and simplicity of deployment and management. Chrome devices, paired with HealthCast's award-winning software that automates proximity badge access to Citrix sessions, enables Citrix customers to quickly access their mission-critical business applications. Based on feedback from HealthCast customers, QwickACCESS users gain an average of 30-45 minutes each day while organizations achieve better compliance with data security and privacy regulations and simplified device management.

Solution Requirements:

Chrome Device

Chrome OS v60 or greater

RFIDeas card reader and 26-bit HID card

HealthCast QA for Google Devices

HealthCast Lynx server

Microsoft SQL Server

Citrix XenDesktop environment
