*In a typical hospital environment, clinicians lose productivity and valuable time with patients when they are required to repeatedly login and logout of multiple workstations throughout the day. QwickACCESS for Chrome devices addresses these challenges by providing clinicians with a fast and secure sign-on solution that leverages Health-Cast's unique proximity badge functionality. Healthcare IT leaders now have a solution to deliver secure proximity badge access to their Citrix environment while reducing the costs and complexity associated with end-user computing.*

QwickACCESS, a secure authentication solution that provides proximity badge access to local and virtual environments, now supports Chrome devices. QwickACCESS users simply tap their badge to access their session and again to secure it, eliminating the need to type in usernames and passwords multiple times throughout the day. Qwick-ACCESS' unique proximity badge functionality also allows users to tap-over'

another user's session, securing the open session and enabling it to be access anywhere on supported devices. Enhancing user compliance with privacy and security policies, QwickACCESS strengthens data security while boosting user convenience and efficiency.

This solution brings HealthCast, Citrix, and Google together to provide a versatile and cost-effective approach to resolving desktop security, application delivery, and user productivity challenges. Customers choose Chrome devices for their speed, security, and simplicity of deployment and management. Chrome devices, paired with HealthCast's award-winning software that automates proximity badge access to Citrix sessions, enables Citrix customers to quickly access their mission critical applications. Based on feedback from HealthCast customers, QwickAC-CESS users gain an average of 30-45 minutes each day while organizations achieve better compliance with data security and privacy regulations and simplify device management.

## about HealthCast

HealthCast has delivered forward-looking secure identity and access management solutions to healthcare providers for over 20 years. Its focus has always been to balance strengthening data security while improving clinicians productivity. Deployed in hundreds of hospital systems, academic medical centers, and regional healthcare facilities with thousands of physician clinic and ambulatory facility deployments, HealthCast solutions again are ranked #1 for 2018 by KLAS.
